Address data automatic collecting system for E-mail - has address data collecting unit which searches member management database and collects address data corresponding to identification of second member stored in centre address register database

FUJITSU LTD 96.04.25 96JP-105298

T01 (98.02.20) G06F 13/00, H04L 12/24, 12/26

97.04.24 97JP-107524

The system includes a member management database (1) which stores address data corresponding to the ID of a member. A centre address register database (3) stores the ID of the first member and the ID of the second member which is the communication partner of the first member.

An address data collecting unit (2) searches the member management database and collects the address data corresponding to the ID of the second member.

ADVANTAGE - Automatically collects address data of communication partner thereby improving operation efficiency. (6pp Dwg.No.1/8)
